V. CATASTROPHIC HEALTH INSURANCE PROGRAM

The Committee on Finance is concerned about the devastating effect which a catastrophic illness can have on families unfortunate enough to be affected by such an illness. Over the past decades science and medicine have taken great strides in their ability to sustain and prolong life. Patients with kidney failure, which until recently would have been rapidly fatal, can now be maintained in relative good health for many years with the aid of dyalysis and transplantation. Patients with spinal cord injuries and severe strokes can now often be restored to a level of functioning which would have been impossible years ago. Modern burn treatment centers can keep victims of severe burns alive and can offer the victim restorative surgery which can in many instances erase the after effects of such burns.

These are but a few examples of the impact which recent progress in science and medicine has had. This progress, however, has had another impact. These catastrophic illnesses and injuries which heretofore would have been rapidly fatal and hence not too expensive financially, now have an enormous impact on a family's finances. The newly developed methods of treating catastrophic illnesses and injuries involve long periods of hospitalization, often in special intensive care units, and the use of complex and highly expensive machines and devices. The net cost of a catastrophic illness or injury can be and usually is staggering. Hospital and medical expenses of many thousands of dollars can rapidly deplete the resources of nearly any family in America. These families are then faced not only with the devastating effect of the illness itself, but also with the necessity of accepting charity or welfare. Catastrophic illnesses do not strike often, but when they do the effects are disastrous—particularly in the context of soaring health care costs.

The Committee on Finance believes that Government and social insurance programs should be able to respond to the progress made in medical science. Medicine and science are now often able to mitigate the physical effects of a catastrophic illness or injury, and the committee believes that govcernment, through our established social insurance mechanism should act to mitigate the financial effects of such catastrophes.

The committee has adopted an amendment which would establish a Catastrophic Health Insurance Program.

The program would be designed to complement private health insurance which has played the major role in insuring against basic health expenses. About 80 percent of people under age 65 have insurance against hospitalization expenses, but these policies all have a limit on hospital days which they will cover. The most common policies cover 60 days of care. Similarly, existing private policies designed to cover medical expenses have upper limits of coverage. Private major medical insurance plans are available, but are held by only

20 to 30 percent of the population. In addition, even the major medical plans have maximum benefits per spell of illness, usually ranging from $5,000 to $20,000.

The committee's Catastrophic Health Insurance Program would be structured to take maximum advantage of the experience gained by medicare. The program would use medicare's established administrative mechanism wherever possible, and would incorporate all of medicare's cost and utilization controls.

Eligibility

The committee amendment establishes a new Catastrophic Health Insurance Program (CHIP) as part of the Social Security Act financed by payroll contributions from employees, employers and the self-employed. Under the committee's provision all persons under age 65 who are fully or currently insured under the social security program, their spouses and dependent children would be eligible for CHIP protection. All persons under age 65 who are entitled to retirement, survivors, or disability benefits under social security as well as their spouses and dependent children would also be eligible for CHIP. This constitutes about 95 percent of all persons under age 65.

Persons over 65 would not be covered as they are protected under the medicare program which, in spite of its limitation on hospital and extended-care days, is a program with a benefit structure adequate to meet the significant health care needs of all but a very small minority of aged beneficiaries. The largest noncovered groups under age 65 are Federal employees, employees covered by the Railroad Retirement Act, and State and local governmental employees who are eligible for social security but not covered due to the lack of an agreement with the State. (There are a small number of people who are still not covered by social security or other retirement programs; the majority of these are domestic or agricultural workers who have not met the necessary social security coverage requirements.)

Federal employees are, however, eligible for both basic and major medical catastrophic health insurance protection under the Federal Employees Health Benefits Act, with the Federal Government paying 40 percent of the costs of such coverage. To assure equitable treatment of those Federal employees who also are eligible for social security, a special provision of the committee bill would require the Federal Employees Health Benefits program to make available to Federal employees who have sufficient social security coverage to be eligible under CHIP, a plan which supplements CHIP coverage; if such a plan is not made available to Federal employees, no CHIP payments will be available for services otherwise payable under the FEHB plan.

Buy-in for State and Local Employees

Under the committee bill, State and local employees who are not covered by social security could receive coverage under CHIP if the State and local governments exercise an option to buy into the program to cover them on a group basis. When purchasing this protection, States

would ordinarily be expected to include all employees and eligible annuitants under a single agreement with the Secretary. A determination by the State as to whether an individual is an annuitant or member of a retirement system or is otherwise eligible to have such coverage purchased on his behalf would, for purposes of the agreement to provide CHIP protection, be final and binding upon the Secretary. Each State which enters into an agreement with the Secretary of Health, Education, and Welfare to purchase CHIP protection will be required to reimburse the Federal Catastrophic Health Insurance Trust Fund for the payments made from the fund for the services furnished to those persons covered under CHIP through the State's agreement with the Secretary, plus the administrative expenses incurred by the Department of Health, Education, and Welfare in carrying out the agreement. Payments will be made from the fund to providers of services for covered services furnished to these persons on the same basis as for other persons entitled to benefits under CHIP. Conditions are also specified under which the Secretary or the State could, after due notice, terminate the agreement.

Benefits

The benefits that would be provided under CHIP would be the same as those currently provided under parts A and B of medicare, except that there would be no upper limitations on hospital days, extended care facility days, or home health visits. Present medicare coverage under part A includes 90 days of hospital care and 60 days of post-hospital extended care in a benefit period, plus an additional lifetime reserve of 60 hospital days; and 100 home health visits during the year following discharge from a hospital or extended care facility. Part B coverage includes physicians' services, 100 home health visits annually, outpatient physical therapy services, laboratory and X-ray services and other medical and health items and services such as durable medical equipment.

The major benefits excluded from medicare, and consequently excluded from this proposal, are nursing home care, prescription drugs, hearing aids, eyeglasses, false teeth and dental care. Medicare's limitations on inpatient care in psychiatric hospitals, which limit payment to active treatment subject to a 190 day lifetime maximum, and the program's annual limitation on outpatient services in connection with mental, psychoneurotic and personality disorders are also retained. An additional exclusion would be for items or services which the Secretary of Health, Education, and Welfare rules to be experimental in nature.

Deductibles and Coinsurance

The committee believes that in keeping with the intent of this program to protect against health costs so severe that they usually have a catastrophic impact on a family's finances, a deductible of substantial size should be required. The committee's proposal has two entirely separate deductibles which would parallel the inpatient hospital deductible under part A and the $50 deductible under part B of medicare.

The separate deductibles are intended to enhance the mesh of the program with private insurance coverage. In order to receive both hospital and medical benefits, both deductibles must be met. If a person were to meet the hospital deductible alone, he would become eligible only for the hospital and extended care benefits. Similarly, if a family were to meet the $2,000 medical deductible, they would become eligible only for the medical benefits.

Hospital Deductible and Coinsurance

There would be a hospital deductible of 60 days hospitalization per year per individual.

After an individual has been hospitalized for a total of 60 days in one year, he would become eligible for payments toward hospital expenses associated with continued hospitalization. The program would thus begin payment with the 61st day of his hospitalization in that year. Only those posthospital extended care services which he receives subsequent to having met the 60-day deductible would be eligible for payment.

After the hospital deductible has been met, the program would pay hospitals substantially as they are presently paid under medicare, with the individual being responsible for a coinsurance amount equal to one-fourth of the medicare inpatient hospital deductible applicable at that time. Extended care services which are eligible for payment would be subject to a daily coinsurance amount equal to one-eighth of the medicare inpatient hospital deductible. In January 1971, this coinsurance will amount to $15 a day for inpatient hospital services and $7.50 a day for extended care services.) Thus the coinsurance could rise yearly in proportion to any increase in hospital costs.

Medical Deductible and Coinsurance

There would be a supplemental medical deductible initially established at $2,000 per year per family. The Secretary of Health, Education, and Welfare would, between July 1 and October 1 of each year (beginning in 1972), determine and announce the amount of the supplemental medical deductible for the following year.

The deductible would be the greater of $2,000 or $2,000 multiplied by the ratio of the physicians' services component of the Consumer Price Index for June of that year to the level of that component for December 1971. Thus, the deductible could rise yearly in proportion to any increase in the price of physicians' services.

After a family has incurred expenses of $2,000 for physicians' bills, home health visits, physical therapy services, laboratory, and X-ray services and other covered medical and health services the family would become eligible for payment under the program toward these expenses. For purposes of determining the deductible, a family would be defined as a husband and wife and all minor and dependent children.

After the medical deductible had been met, the program would pay for 80 percent of eligible medical expenses, with the patient being responsible for coinsurance of 20 percent.

Deductible Carryover

As in part B of medicare, the plan would have a deductible carryover feature—applicable to both the dollar deductible and the hospital-day deductible—under which expenses incurred (or hospital days used) but not reimbursed during the last calendar quarter of a year would also count toward the satisfaction of the deductibles for the ensuing year. For example, an individual admitted to a hospital with a cardiac condition on December 10, 1972, and continuously hospitalized through February 19, 1973, would not, in the absence of the carryover provision, meet the hospital-day deductible unless he were to be hospitalized for at least another 10 days in 1973. With a carryover provision, however, the individual described above would meet the hospital deductible on January 30, 1973. Similarly, if a family's first eligible medical expenses in 1972 amount to $1,200 and were incurred during the months of November and December, and an additional $3,000 in eligible medical expenses are incurred in 1973, the family would, in the absence of a carryover provision, be eligible for payment towards only $1,000 of their expenses in 1973. With a carryover provision, however, the family described above would be eligible for payment toward $2,200 of their expenses in 1973.

Administration

Payments made to patients, providers, and practitioners under this program would be subject to the same reimbursement, quality, health and safety standards, and utilization controls as exist in the medicare program. Reimbursement controls would include the payment of audited "reasonable costs" to participating institutions and agencies, and "reasonable charges" to practitioners and other suppliers. However, the committee expects that appropriate modifications will be made to take into account the special features of this program, including a modification to exclude "bad debts" from those costs eligible in computing reasonable cost payments to institutions.

The utilization of services would be subject to review by present utilization review committees established in hospitals and extended care facilities and by the professional standards review organizations established under another committee amendment. The committee believes that all of the above controls should be applied to reimbursement of expenses for services rendered under the proposed catastrophic illness insurance program. In addition, the Office of the Inspector General for Health Administration established under another committee amendment would be expected to closely monitor the administration of the program and can be expected to provide valuable information with respect to increasing the efficiency of the program.

The proposal contemplates using the same administrative mechanisms used for the administration of medicare including, where appropriate, medicare's carriers and intermediaries. Using the same administrative mechanisms as medicare will greatly facilitate the operation of this program. The proposal also would encompass use of medicare's statutory quality standards, in that the same conditions of participation which apply to institutions participating in medicare would apply to those institutions participating in CHIP. These standards

serve to upgrade the quality of medical care and their application under this program should have a similar salutary effect.

The Social Security Administration, utilizing its network of district offices, would determine the insured status of individuals and relationships within families which are necessary to establish entitlement to CHIP benefits. The determination of whether the deductible expenses had been met would also be handled by the Social Security Administration in cooperation with carriers and intermediaries. The proposed administrative plan envisions establishing a $2,000 minimum expense amount before individual bills would be accepted. This would protect the administrative agencies from being inundated with paperwork.

Financing

The first year's cost of the program is estimated at $2.5 billion on an incurred basis and $2.2 billion on a cash basis. The committee provision would finance the program on a $9,000 wage base with the following contribution schedule: 1972–74, 0.3 of one percent of taxable payroll on employees and 0.3 on employers; 1975–79, 0.35; 1980 and after, 0.4. Rates for the self-employed would also be 0.3, 0.35, and 0.4 respectively.

The contributions would be placed in a separate Federal Catastrophic Health Insurance Trust Fund from which benefits and administrative expenses related to this program would be paid. The complete separation of catastrophic health insurance financing and benefit payments is intended to assure that the catastrophic health insurance program will in no way impinge upon the financial soundness of the retirement, survivors, or disability insurance trust funds or medicare's hospital and supplementary medical insurance trust funds. Such separation will also focus public and congressional attention closely on the cost and the adequacy of the financing of the program.

To provide an operating fund at the beginning of the program (in recognition of the lag in time between the date on which the taxes are payable and their collection), and to establish a contingency reserve, a Government appropriation would be available (on a repayable basis without interest) during the first 3 calendar years of the program. The amount which could be drawn in any such calendar year could not exceed the estimated amount of 6 months of benefit payments during that year.

Relationship With Medicaid

The catastrophic illness insurance program would be supplemental to the medicaid program with regard to public assistance recipients and the medically indigent in the same way in which it will be supplemental to private insurance for other citizens. Thus, medicaid will continue to be the State-Federal program that is intended to cover the basic health needs of categorical assistance recipients and the medically indigent. The benefit structure of medicaid varies from State to State, but in general it is a basic rather than a catastrophic benefit package.

In addition, medicaid will continue to play a substantial role in financing the cost of nursing home care, which represents a cata-

strophic cost to many people, especially the aged. The catastrophic health insurance program will, of course, lessen the burden on the medicaid program to some degree, since those covered by medicaid who are eligible would have a large proportion of their catastrophic expenses covered by this program, leaving only the deductible and coinsurance amounts for the medicaid program to pay. This factor will not only enable the States to contain the costs of their programs, but may also encourage them to improve coverage of basic services.

Conclusion

The committee estimates that more than one million families of the approximately 49 million families in the United States annually incur medical expenses which will qualify them to receive benefits under the program. Of course, nearly all American families will receive the benefit of insurance protection against the costs of catastrophic illnesses. The program is not intended to meet the health costs which the population incurs for short-term hospitalization and acute illness. This program is intended to insure against those highly expensive illnesses or conditions which, although a potential threat to every family, actually strike only a relatively few. The committee believes that individuals should, during their working years, be able to obtain protection against the devastating and demoralizing effects of such costs.

These provisions and the taxes to pay for them would become effective January 1, 1972.
